

E-LITE

MRL 630 KG 2:1 GEARLESS

e-LITE is a new generation of lift specifically designed by CTV to allow savings in many ways. As our clients have been demanding an economic and reliable solution for some time, this lift has been optimized to meet our clients requirements economically whilst still offering the high standard of service they have grown accustomed to.

ecologic

Due to its innovative mechanical design, the machine requirements are reduced and can offer energy savings of up to 50% when compared to a traditional geared machine. When taken into consideration with their durability and their low maintenance requirements, our e-LITE is one of the most energy efficient lifts in the market, giving savings throughout its working life when compared with other lifts.

0070

installation

Due to our innovative design the installation process is highly efficient and offers minimal disruptions throughout the installation; it also saves money for our customers by minimizing the amount of construction work necessary.

space

Our inventive car frame design allows us to offer reduced pit depths of 800 mm, this can be reduced further with the use of some additional components where necessary. The standard headroom requirement is only 3400 mm.

0050

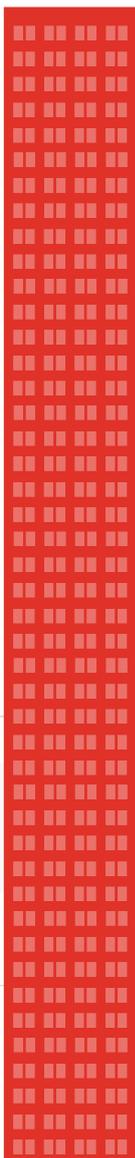

desing and comfort

Whether you select one of our standard cars or profit from our à la carte options, you will get a modern, functional and decorative product adapted to your needs. Our lifts offer a high level of comfort thanks to their modern design and use of last generation technology.

price

Throughout the design of this lift we have always had in mind the current economical and ecological times we are living in, our e-LITE is efficiently produced, environmentally friendly, ergonomically comfortable and with a modern design.
